PRODUCT RANGE

Nutraceuticals comprises of dietary supplements taken for healthy development of the body. They aid in maintaining normal body functions and the overall growth of an individual. We have manufacturing facility to manufacture tablets, hard gel capsules, soft gel capsule, powder, sachets and oral liquids to cater to any product in any of the following product category. Beyond this also any of your product requirements can easily be manufactured at our premises. In short if there is any nutraceutical product that you can think of, we can manufacture it.

Broadly the product range can be categorized into following category

Vitamins

Vitamins are organic compounds required in limited amounts for healthy functioning of the body. Thirteen vitamins are universally recognized at present. Traditionally food has been the only source of vitamins for the body. However, owing to the changing lifestyle pattern and change in food habits, there may be deficiency of some or the other vitamins. It is estimated that over 80% of the world population may have deficiency of some or the other vitamin. Different vitamins have been associated with proper functioning of different part of the body. Single vitamin tablets/ capsules are given for achieving a particular result For example: Vit A is given for hair growth and for fighting wrinkles, etc.; Vit C tablets are given for its antioxidant activity; Vit B12 capsules are given to elderly people as supplement for fatigue, memory loss and weakness; Vit B1 Tablets/ Capsules are given to promote the nervous system; Vit B2 Capsule is given to aid the treatment of migraine patients, Vit D3 to aid treatment of osteoporosis and other bone related disorders, Vit B7 (biotin) for hairfall, etc.

Multivitamins and Multimineral (and anti-oxidants)

Various nutrients in terms of microminerals and macrominerals are essential for the body to perform physiological functions. While all the nutrients are generally available with food in the required quantity there are many minerals that are area specific deficient (for example Iodine deficiency is prominent in hilly areas and in Africa) or many minerals that gets depleted from water because of the purification methods (for example RO water systems removed majority of the minerals from water). Because of the lifestyle and food habits, supplementation of vitamins and minerals has become a very important factor. We are not the only ones who believe that supplementation is necessary to fill in the nutritional gap. The American medical association is advising all adults to take atleast one multivitamin pill a day. Harvard School of public health advices everyone to take a multivitamin daily as an inexpensive nutrition insurance policy. To further enhance the benefits of multivitamins and multimineral, many of the formulations have an added anti-oxidant like ginseng, lycopene, omega-3-fatty acid, grape seed extract, green tea extract, Co-enzyme Q10, etc. to delay the oxidation of cells in the body. The said multivitamins and multimineral (with anti-oxidants) are available in numerous possible combinations in tablet, hard gel capsule, soft gel capsule, syrup and drops. We can manufacture your exact composition or can suggest many compositions to suit the exact requirement. Standard combinations include multivitamins & multimineral, multivitamins & multimineral with Ginseng/Lycopene/Omega 3 fatty acid/ Coenzyme Q10, calcitrol with Calcium carbonate folic acid and Vit B12, Ferrous ascorbate with folic acid zinc and Vit B12, DHA related combinations, Glucosamine with chondrin and MSM, pregabalin with Vit B12, gabapentin with Vit B12, Vit B-complex with L-Lysine, Astaxanthin with Phospholipids etc.

Prebiotics and Probiotics

Bacteria and human cells live in complete synergy in a healthy body. It is estimated that the number of bacterial cells in the body is more than the human cells. Both together constitute the human microbiome. Many of the microbiota is known to be useful to the human host; however the role of most resident microorganisms is not well understood. The Human Microbiome Project took on the project of sequencing the genome of the human microbiota, focussing particularly on the microbiota that normally inhabit the skin, mouth, nose, digestive tract, and vagina. The initial results were published in the year 2012 giving rise to a whole new field by the name of Prebiotics (the microorganisms that are helpful to the human body) and probiotics (the food of this microorganisms). At Humanique we have various products in this segment in hard gel capsule/ sachet form. Various combinations are available depending on the intended area of usage viz. for intestine (gut) health, vaginal health, immunity, skin health (urticarial/ acne). Moreover, during treatment of infections antibiotics are prescribed which eliminate the bacteria in the body (pathogens as well as useful bacteria). To overcome the side effects of antibiotics, prebiotics and probiotics are recommended. Various strains of bacteria have proven to be useful for the human body. Examples of few of these are Lactic acid bacillus, Lactobacillus Reuteri, Lactobacillus Rhamnosus, Bifidobacterium bifidum, Bifidobacterium Longum, Bifidobacterium Infantis, Saccharomyces Boulardii, etc.

Fortified Food (Protein & other derivatives)

Protein is considered to be the building block of the body which performs a vast array of functions including and not limiting to muscle build up. It is one of the most (if not the most) important component of the diet. During many of the life stages like growing children, infants, pregnant ladies, lactating mothers, malnourished adult, old age, etc. warrant an additional boost of protein with some supplements. Protein is available in powder form with various dosage types (bulk weight, individual dosage sachet). Moreover, protein powder can be customized for a diabetic or calorie conscious person with sugar free options. Protein powder for pregnant ladies and lactating mother has an additional boost of DHA and Lycopene which are necessary for healthy mental growth of the foetus/ infant. Protein supplements can be made in various flavoured options to suite the taste pallet of an individual. The currently more dominant options include chocolate, vanilla, American ice-cream, mango, etc.

Colostrum is another fortified food that is used as supplement to boost immunity and improve muscle gain when working out. It is considered to be the nature's first immune defence. Colostrum is nothing but a mother's milk that is produced in the latter stages of pregnancy and immediately after birth of the offspring. It is available in capsule and powder form.

In a nutshell, we can manufacture any Nutraceutical product that you can think of. You can have your fixed set of composition or you can select any of our standard set of compositions for any of the above mentioned category of product.
